SDITO LAB ASSIGNMENTS

Assignment no :- 04

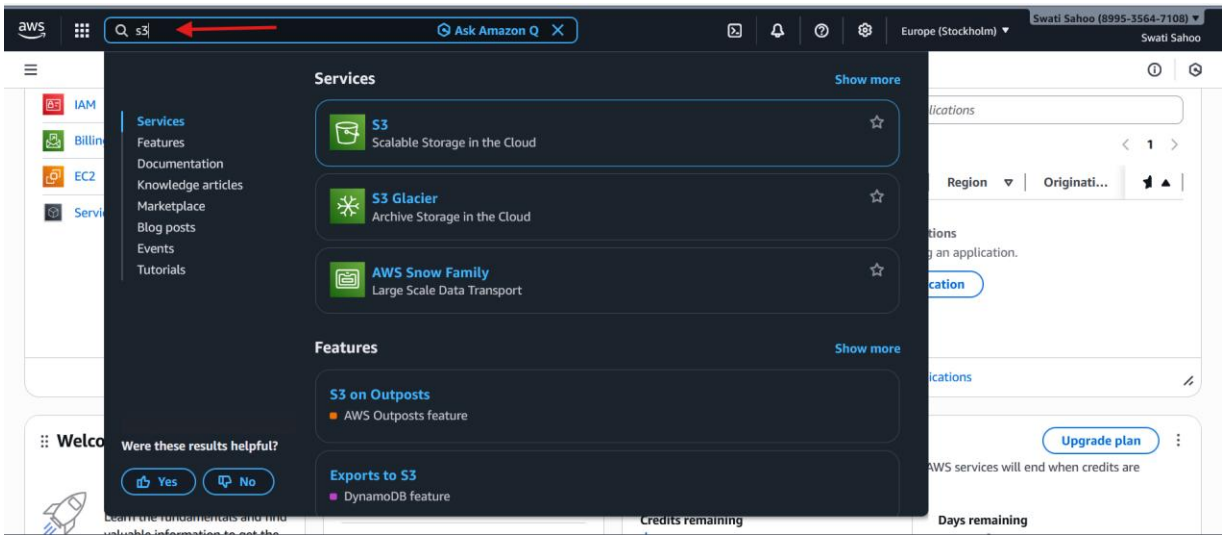
P.S:CREATE A PRIVATE BUCKET IN AWS.UPLOAD A FILE AND CHECK BY REASSIGNED URL WHETHER THE FILE URL IS WORKING.

SOLUTIONS:

STEP-1: At first, we need to login the AWS console.

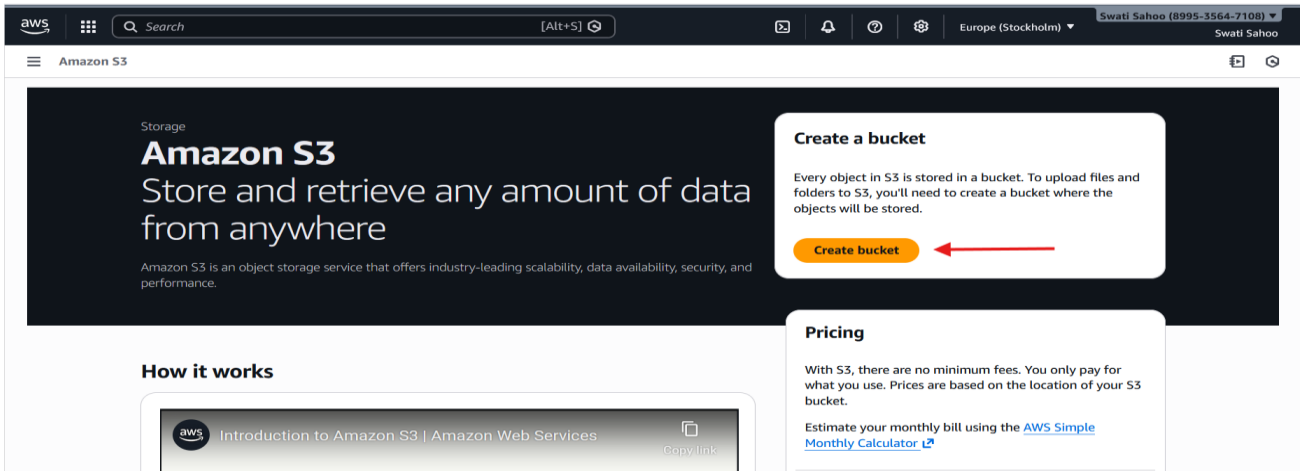
STEP-2:Then search s3 in the search bar.

STEP-3: After that click on the s3 service.



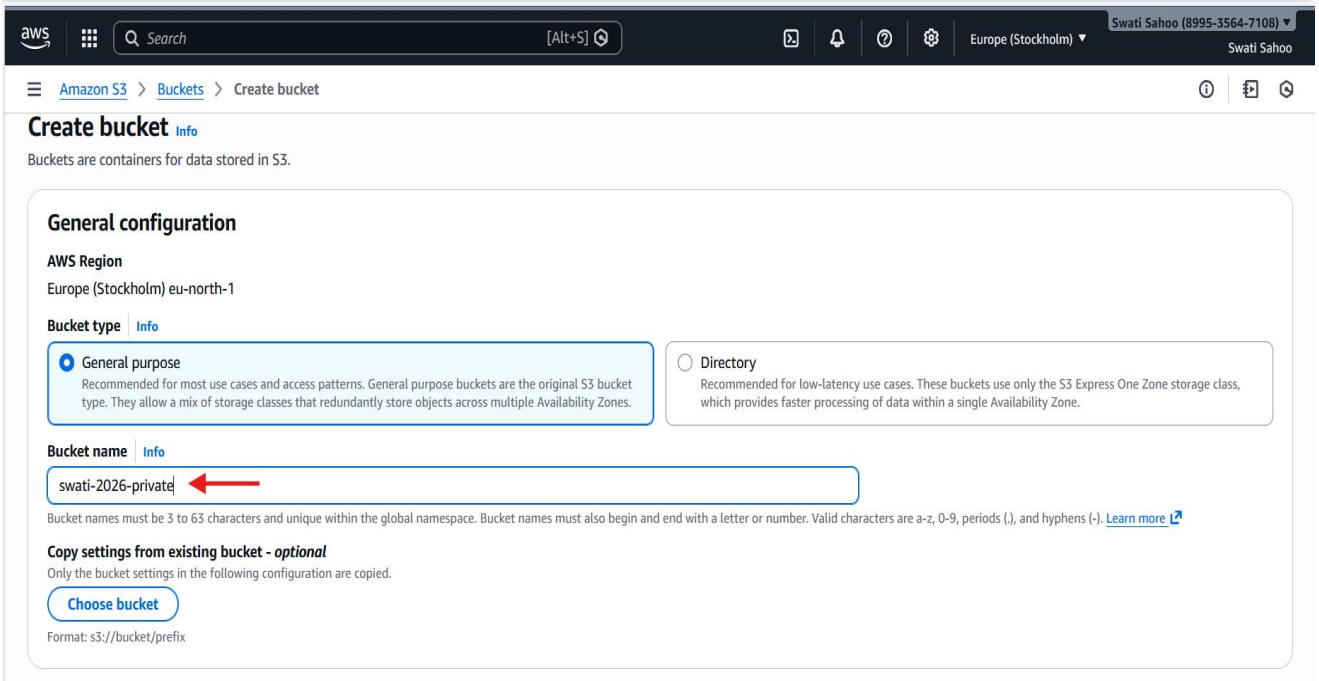
STEP-4: Now we redirect to the s3 dashboard..

Step-5: In the s3 dashboard click on the create bucket.

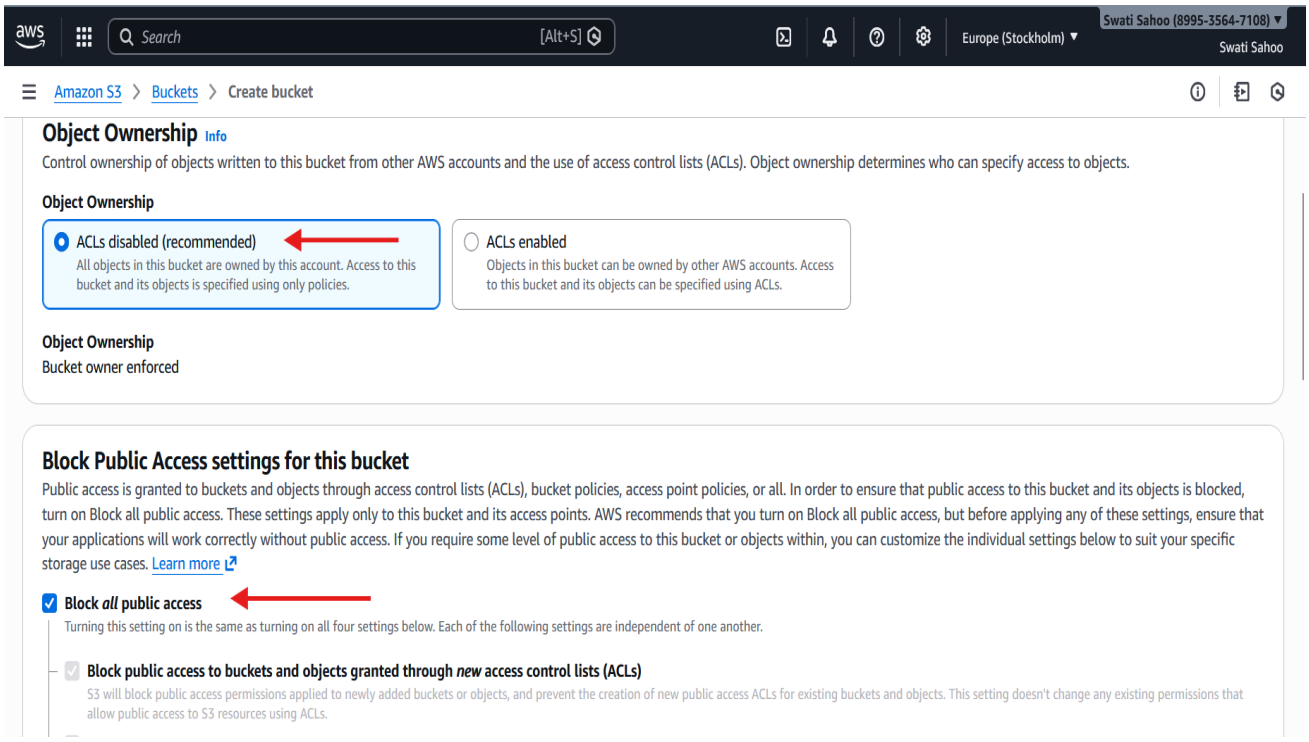


STEP-6: After click on create bucket we redirect to the create bucket interface.

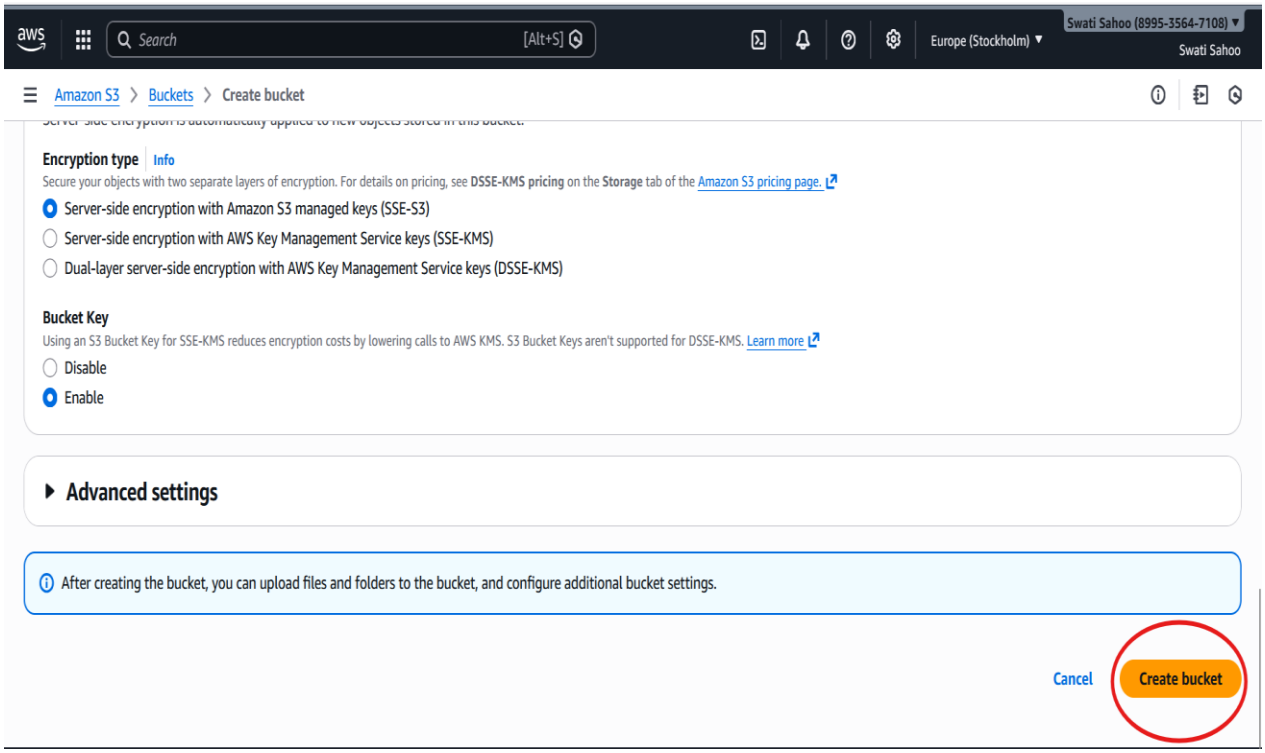
In this interface the bucket type will be “General purpose”,and give the bucket name.



STEP-7:For create private bucket,we keep the ACLs disabled and click block all public access.

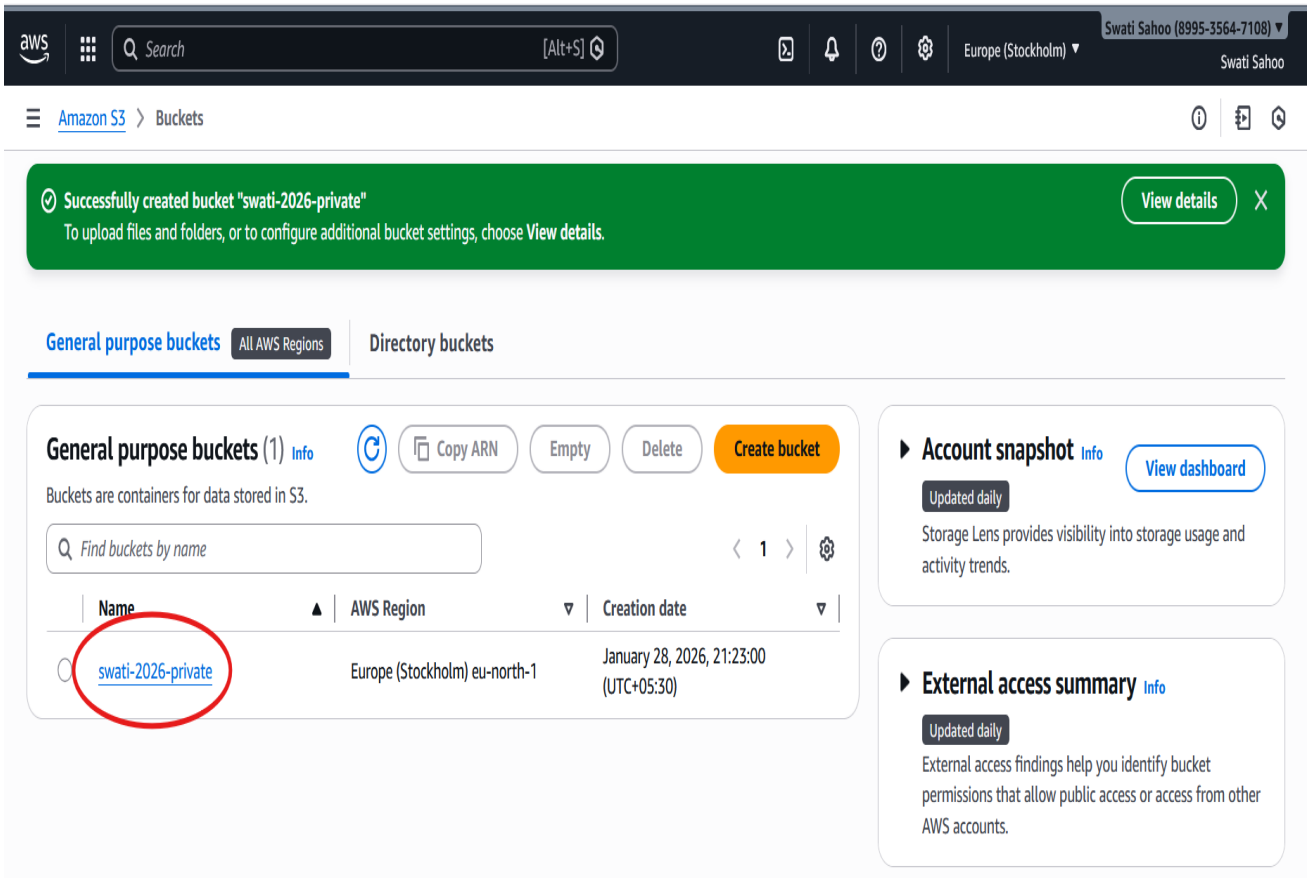


STEP-8:All option are remain same and then click on create bucket.

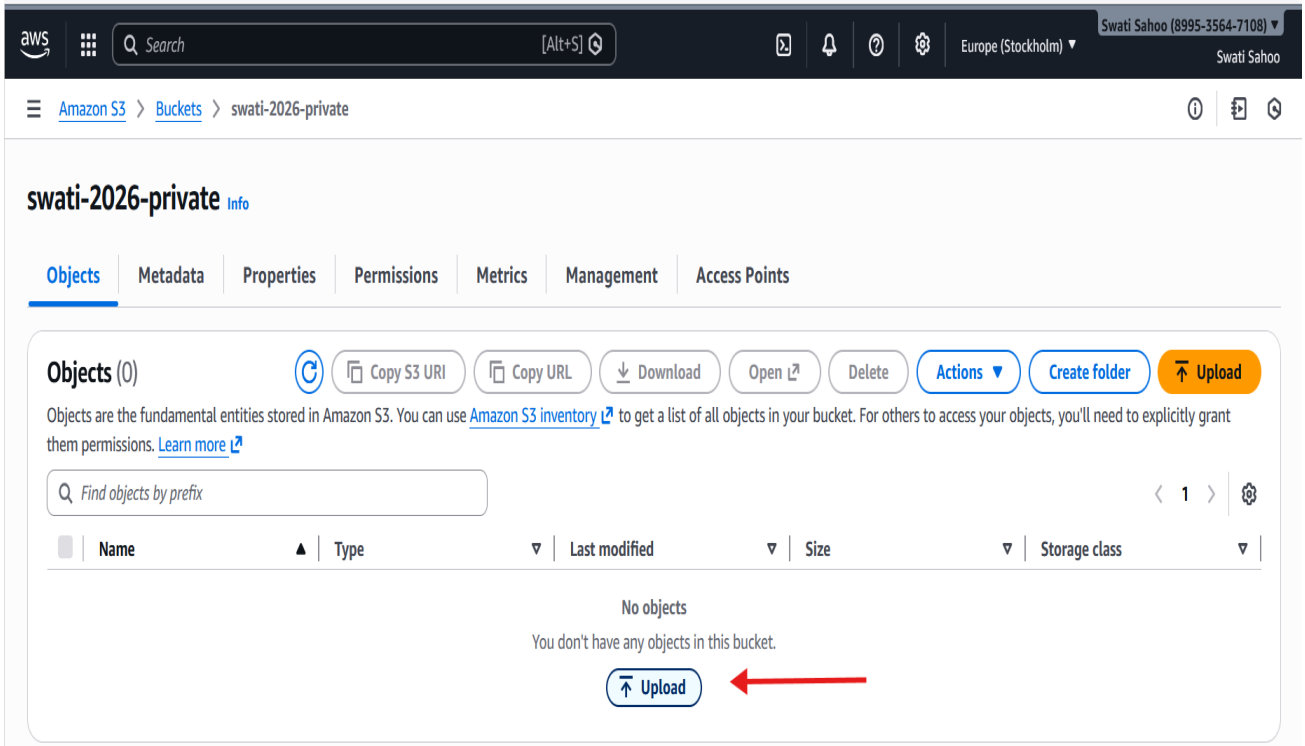


STEP-9:The bucket "swati-2026-private" is created successfully.

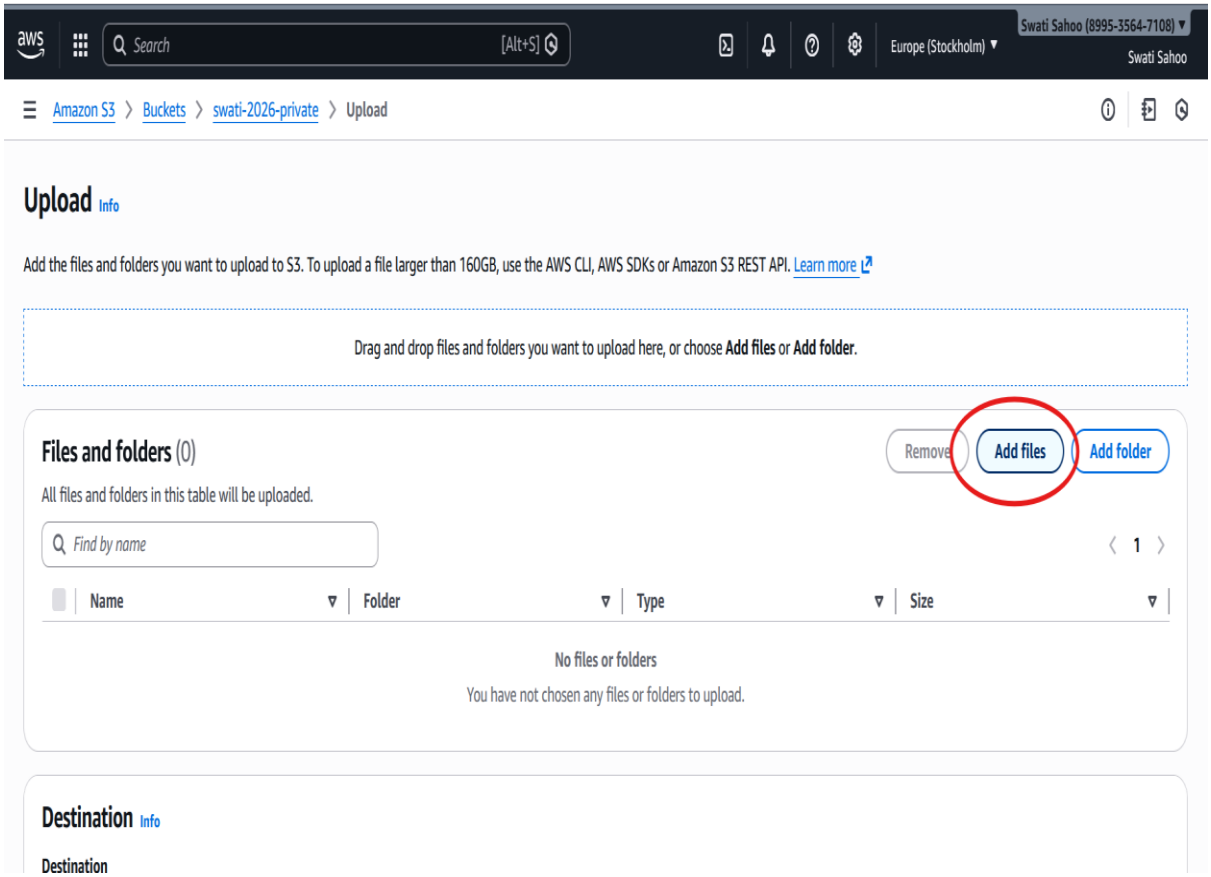
STEP-10:Then click on bucket name.



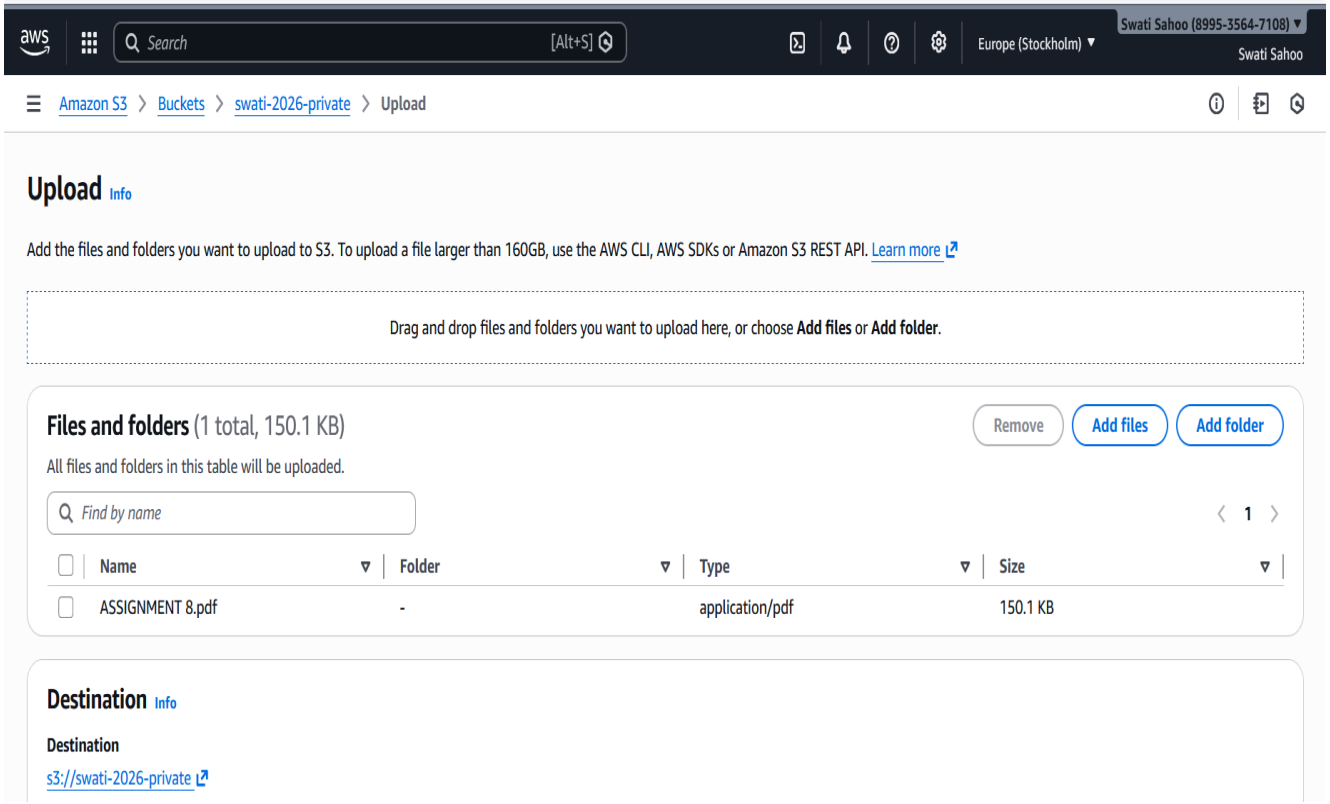
STEP-11: After that click on upload option.

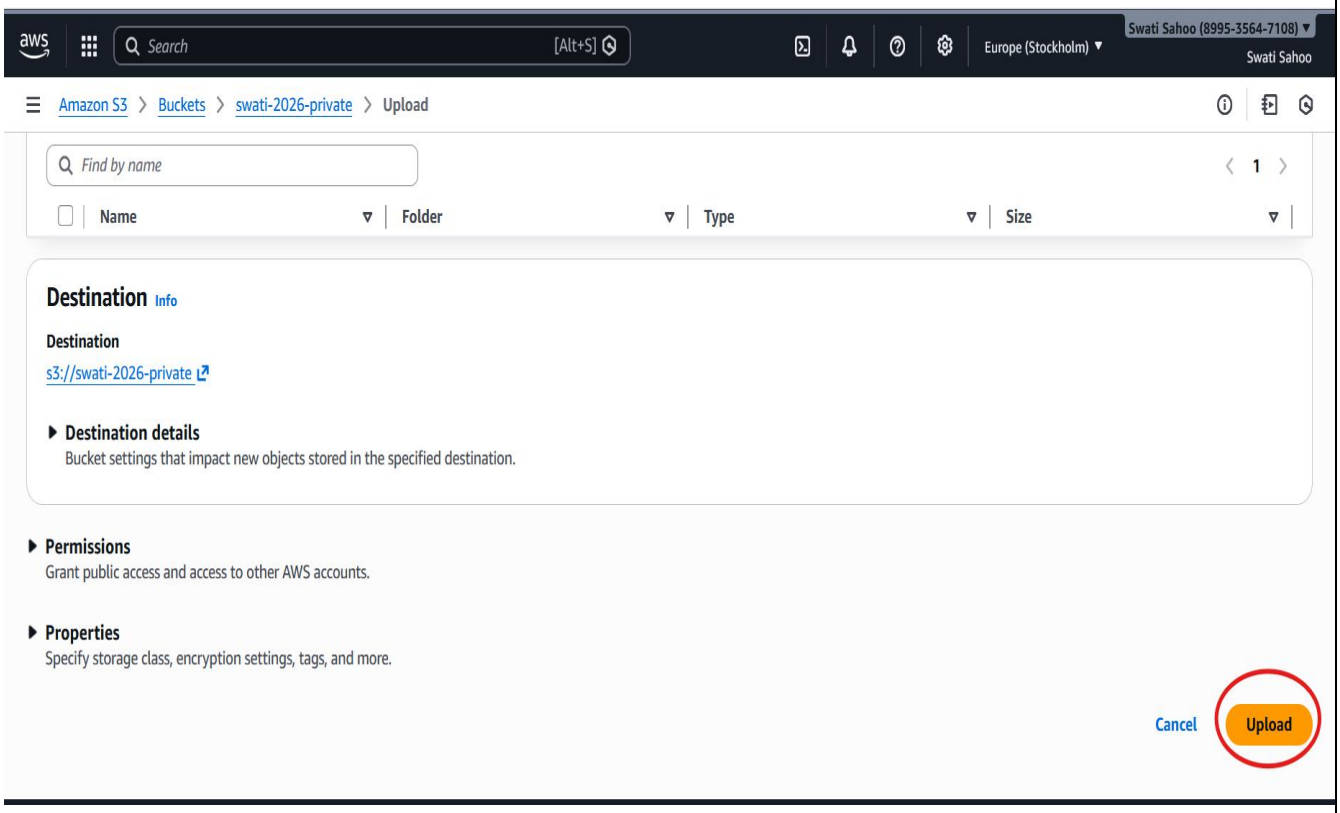


STEP-12:IN upload interface click on Add files.

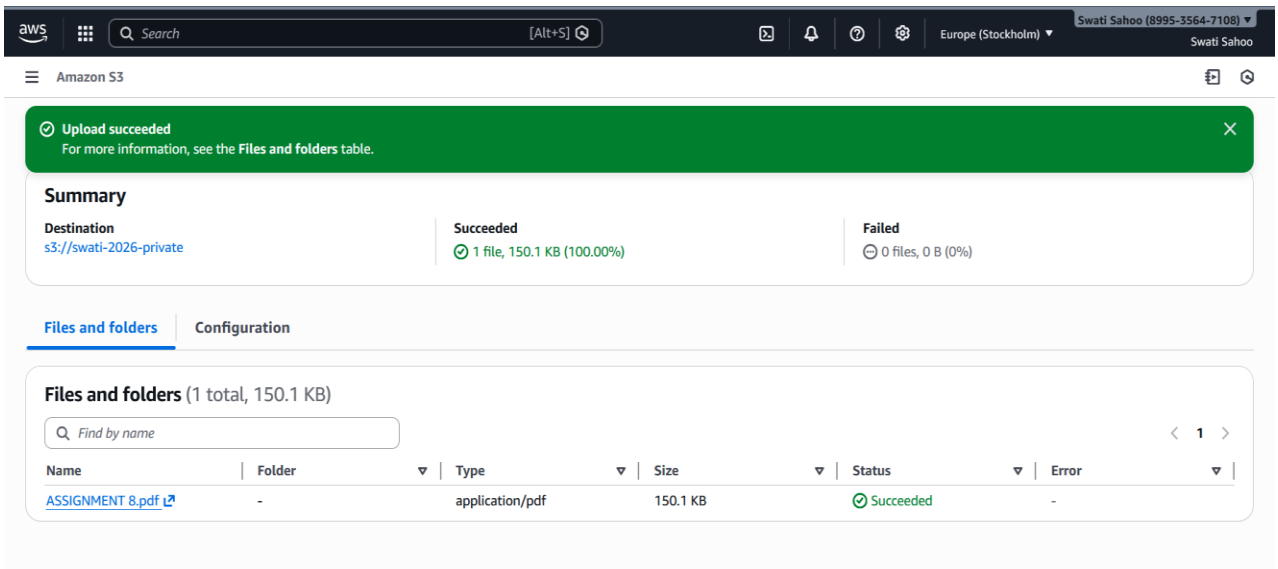


STEP-13:we take a file from our device and upload it.

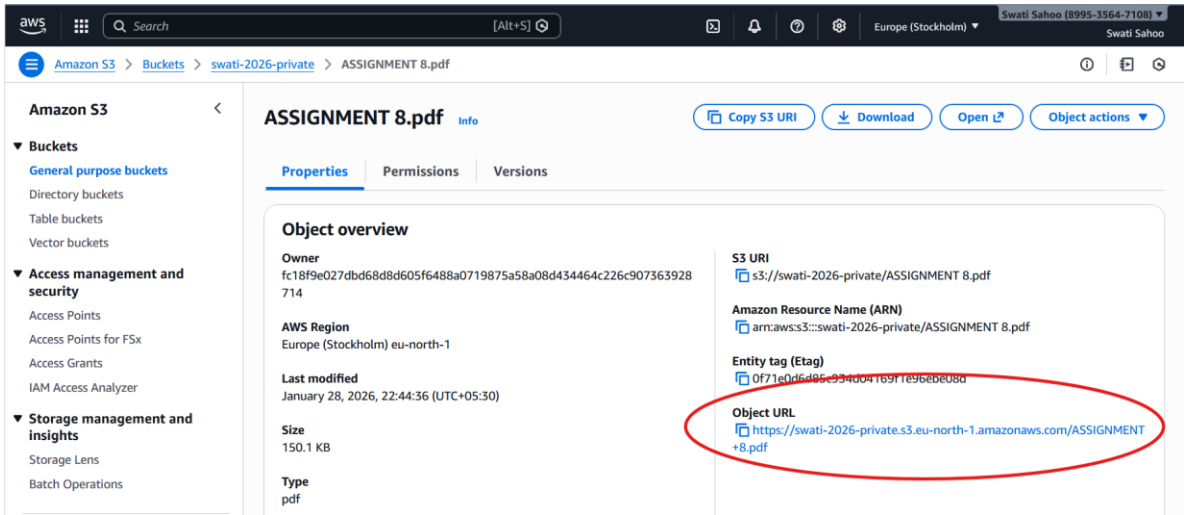




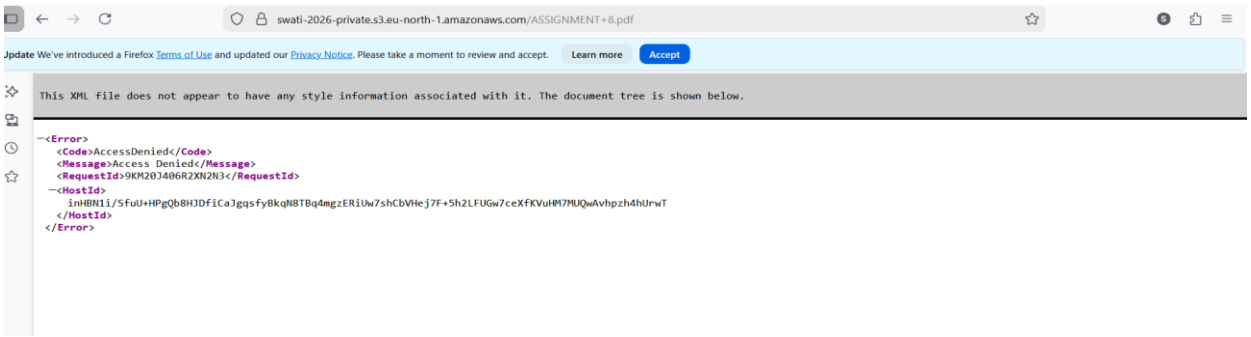
STEP-14:the file uploaded successfully. And click on the file name.



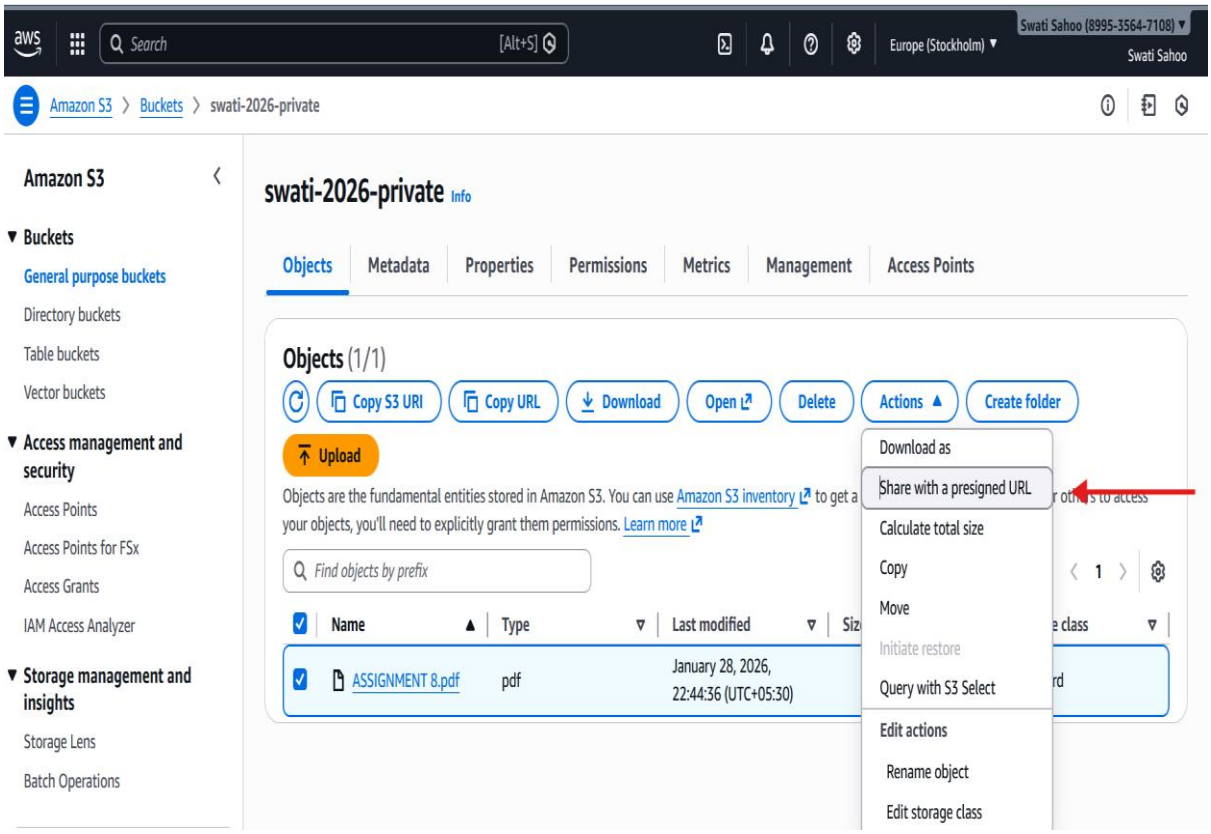
STEP-15:Afterthat from the file properties copy the object URL and paste it in a new window.



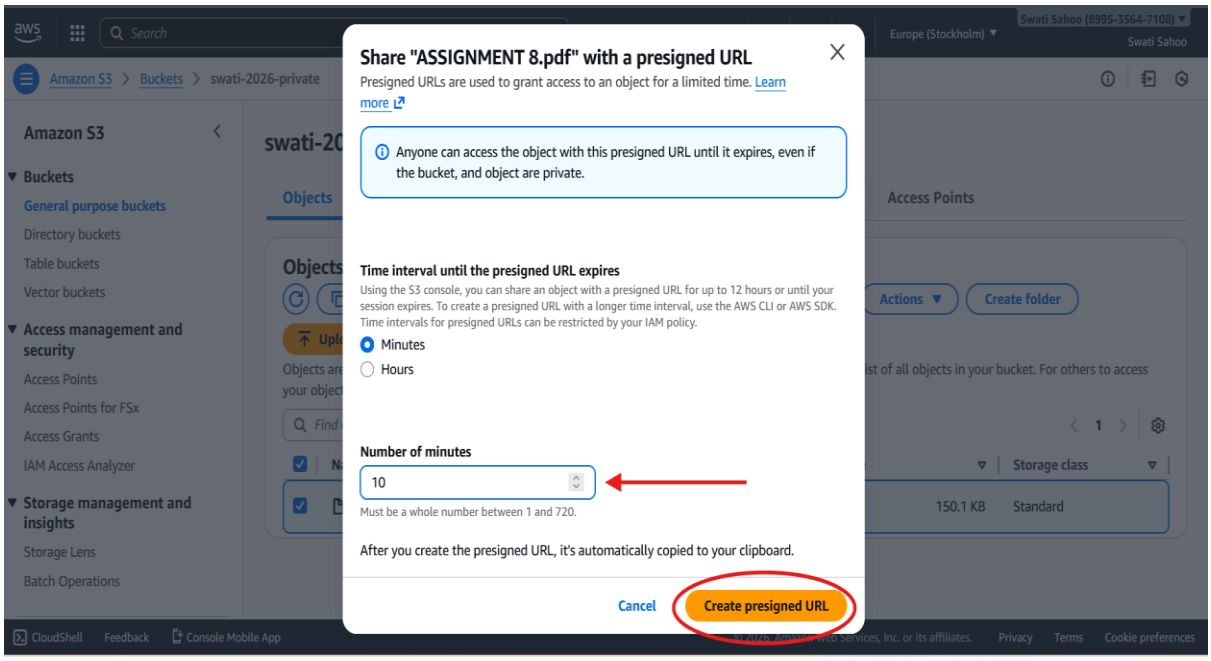
STEP-16:After paste we see the access denied message because of private bucket.



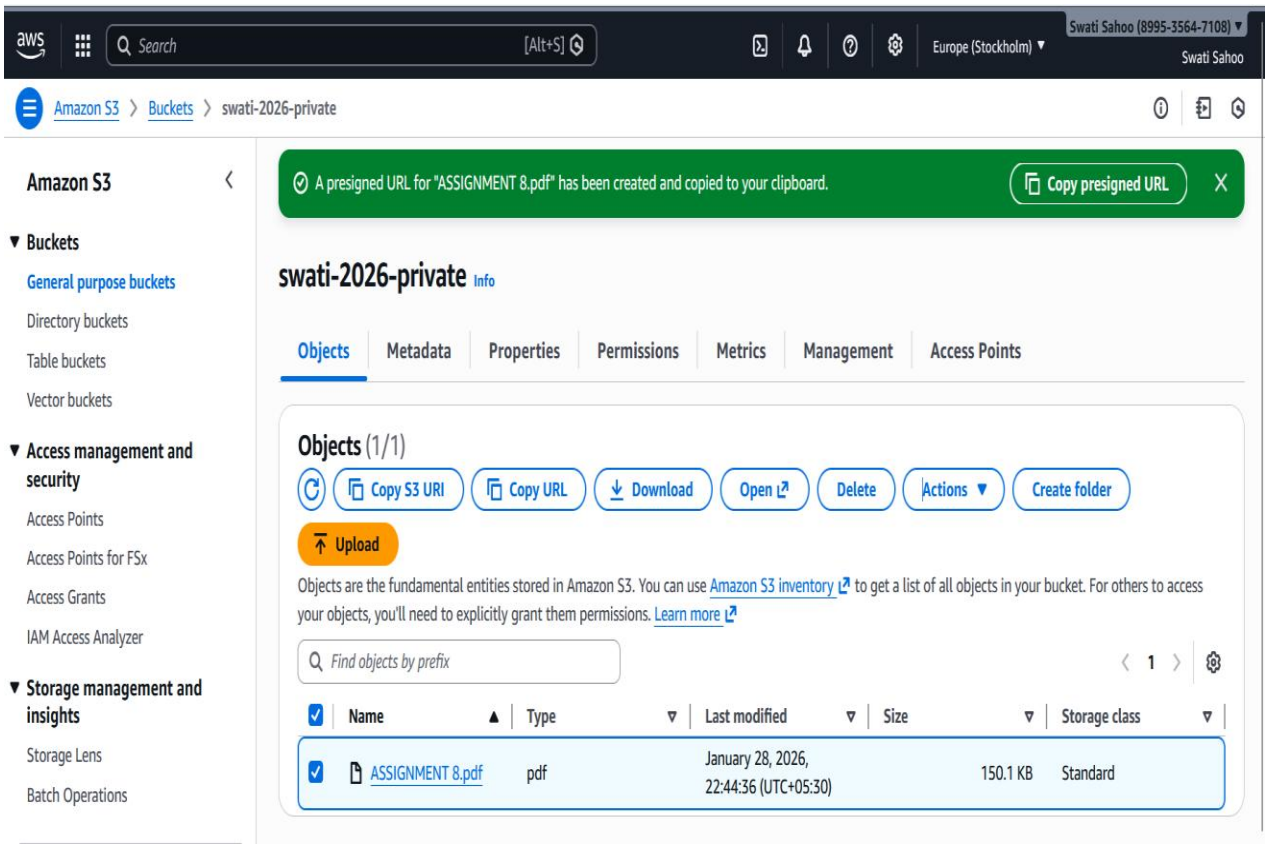
STEP-17:TO reassigned the URL,for accessing the object, we go inside the bucket and select the object ,then we need to click on the “Actions”option and go the “Share with a presigned URL” option.



STEP-18:After clicking on “Share with a presigned URL “,we set the time and click on “create presigned URL”.



STEP-19:The presigned URL for this file has created and then copy the URL and paste it in a new window for checking.



STEP-20:Now we can access the object ,the "ASSIGNMENT 8.pdf" for a particular duration of time.

ASSIGNMENT 8: Concept of Exception Handling

Problem Statement: 1. Write a code segment in Try block where divide by zero occurs, also write corresponding catch block to catch the exception that occurs in the try block. Print the origin of the exception caught.

Source code:

```
public class DivideByZeroExample {
  public static void main(String[] args) {
    try {
      int numerator = 10;
      int denominator = 0;
      int result = numerator / denominator;
      System.out.println("Result: " + result);
```
