Assignment no :- 05

P. S: CREATE A PUBLIC BUCKET IN AWS.UPLOAD A FILE AND GIVE THE NECESSARY PERMISSION TO CHECK WHETHER THE FILE URL IS WORKING.

SOLUTIONS:

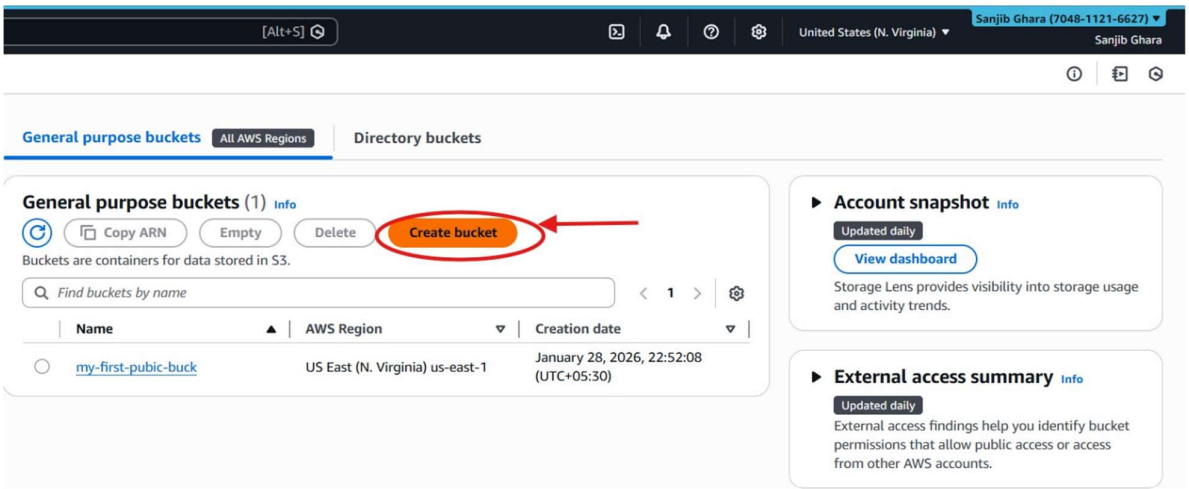
STEP-1: At first, we need to login the AWS console.

STEP-2: Then search s3 in the search bar.

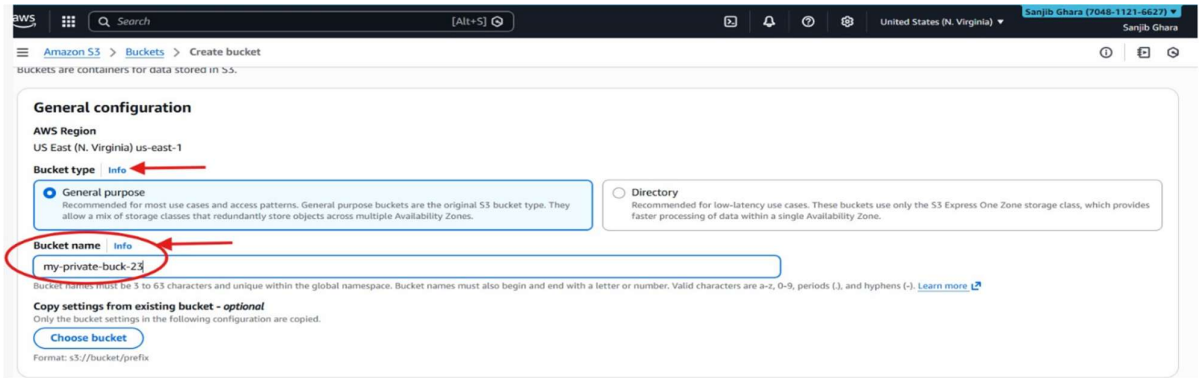
STEP-3: After that click on the s3 service.

STEP-4: Now we redirect to the s3 interface.

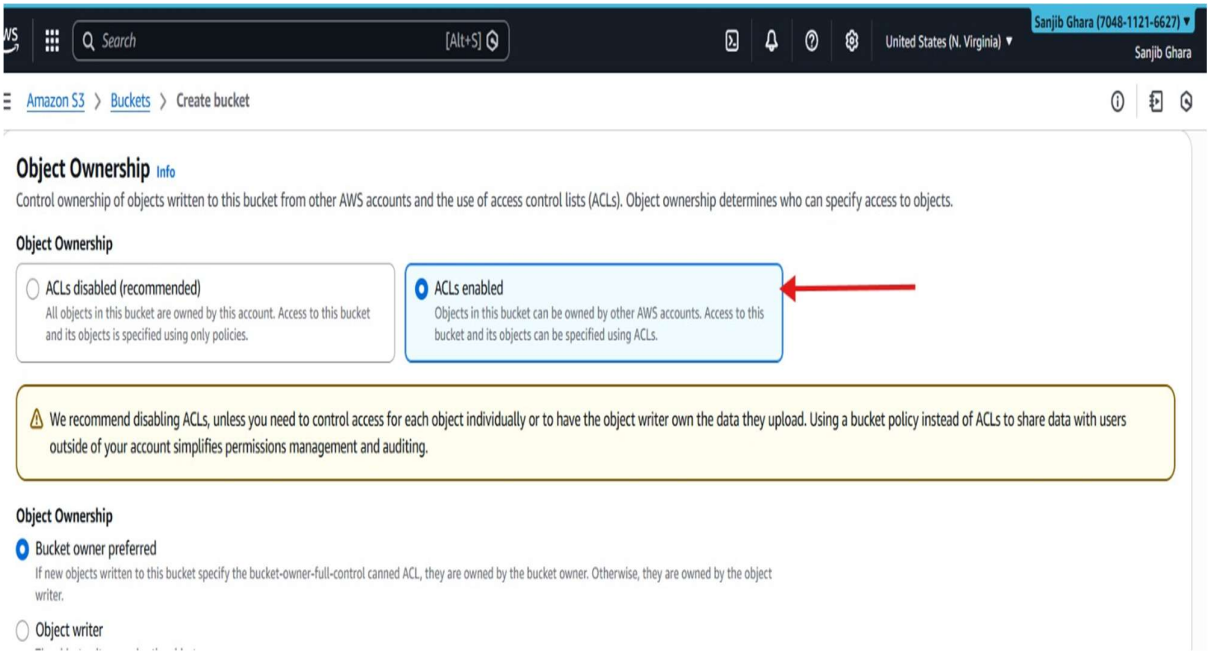
Step-5: In the s3 interface click on the create bucket.

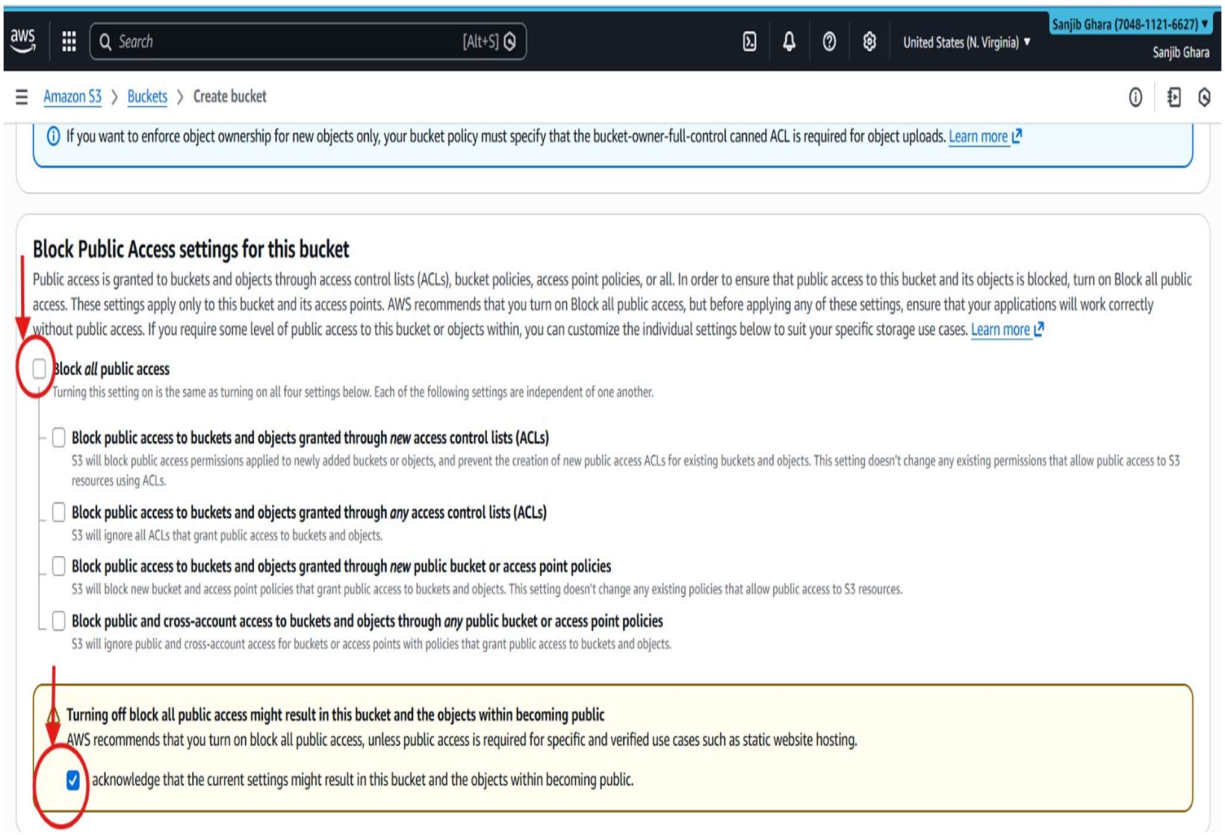


STEP-6: After click on create bucket, we redirect to the create bucket interface. In this interface the bucket type will be "General purpose", and give the bucket name.

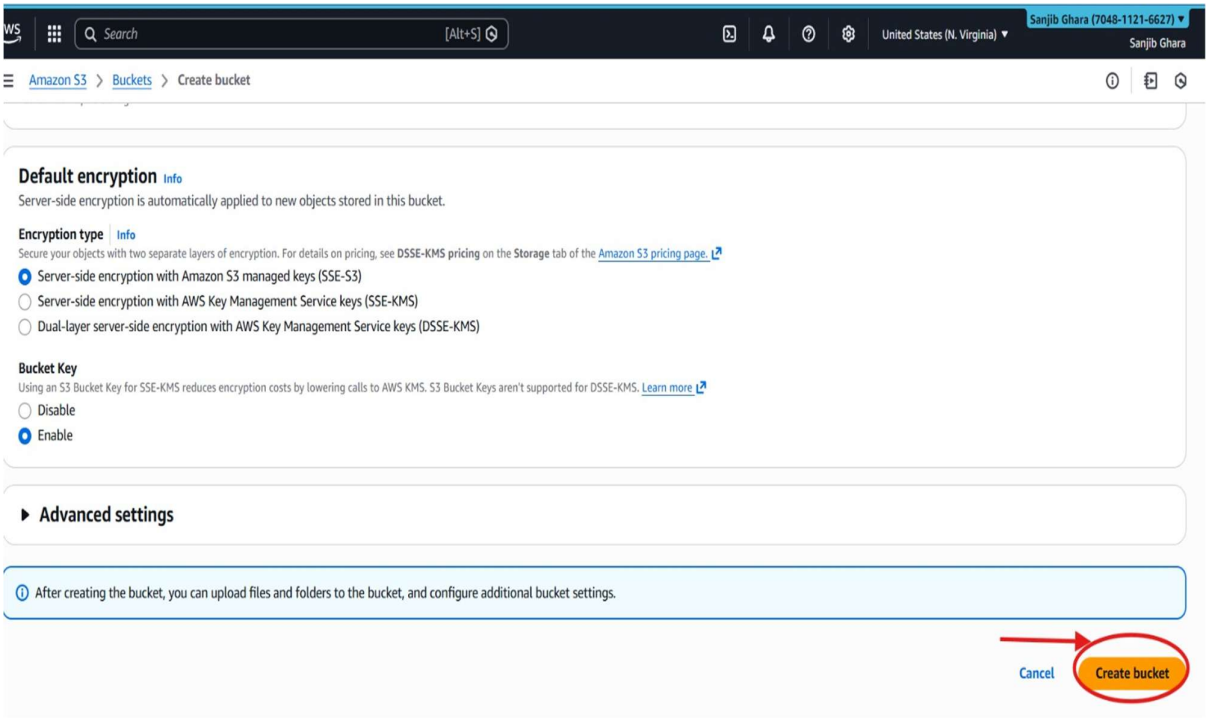


STEP-7: For create public bucket, we keep the ACLs enabled and uncheck "block all public access".



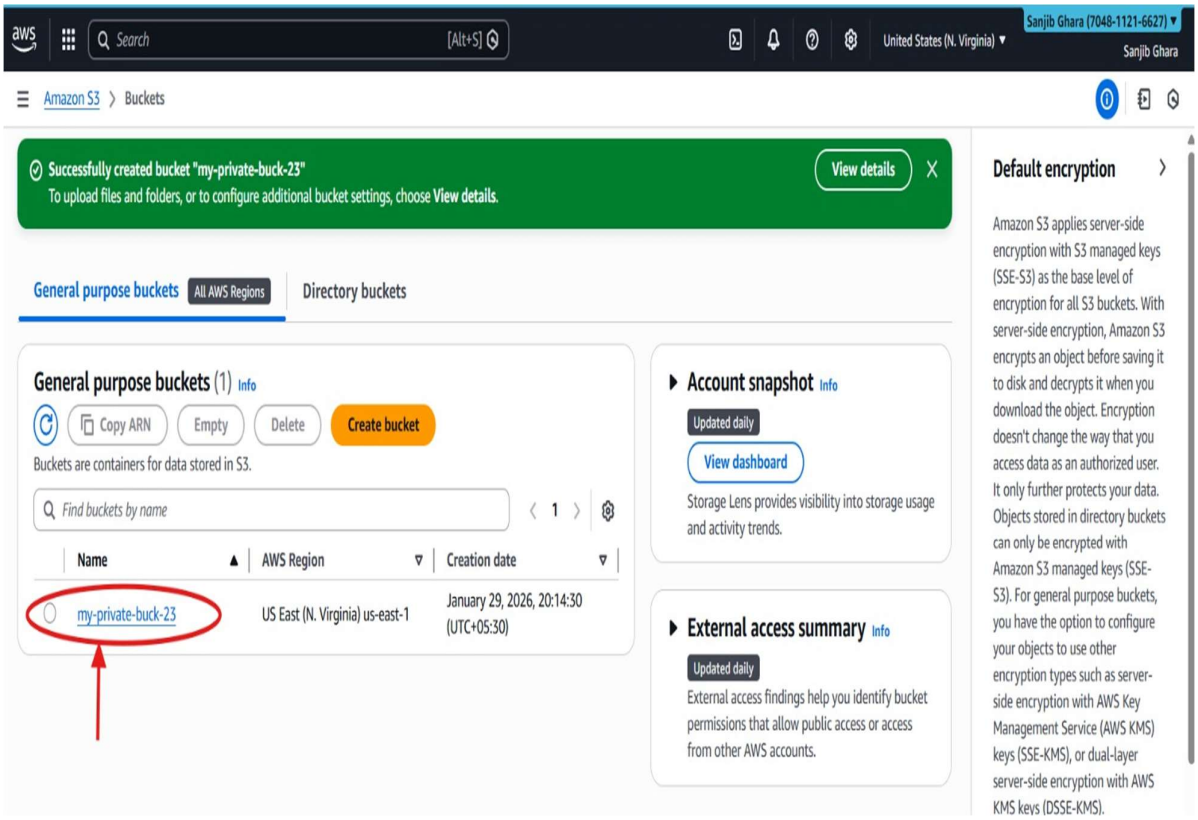


STEP-8: All other field is remained same and then click on "create bucket".

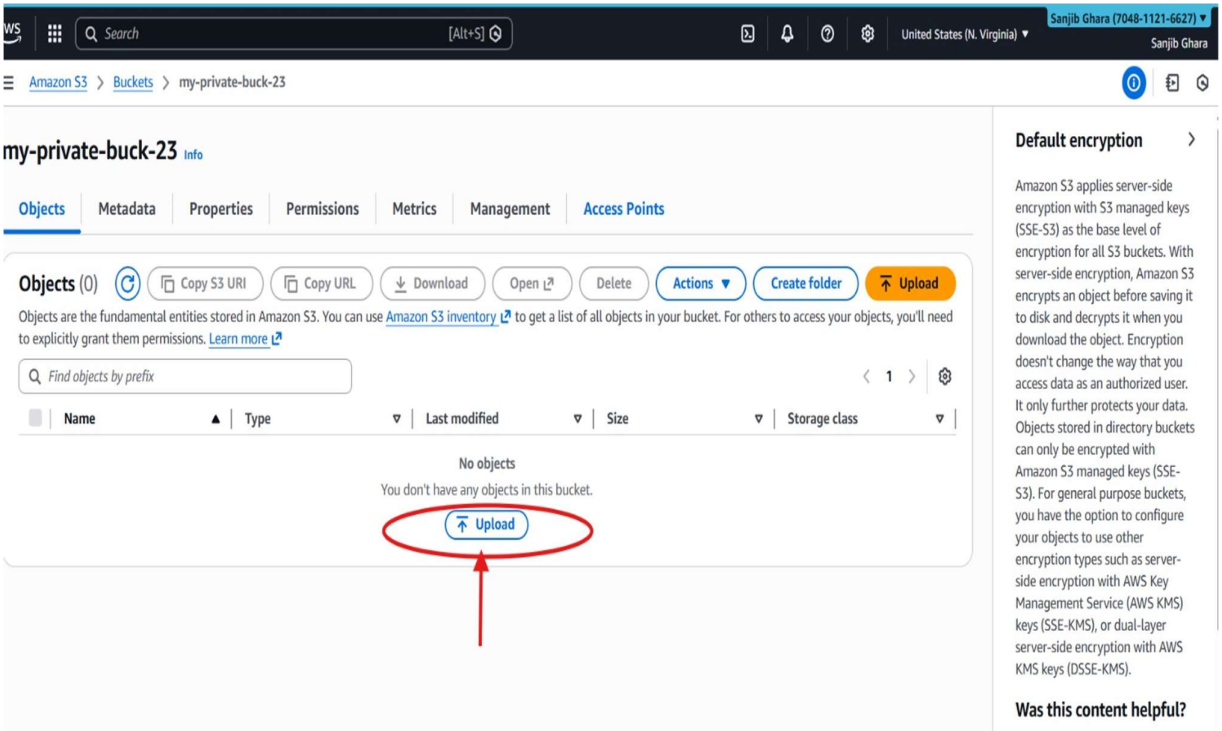


STEP-9: The bucket "my-private-buck-23" is created successfully.

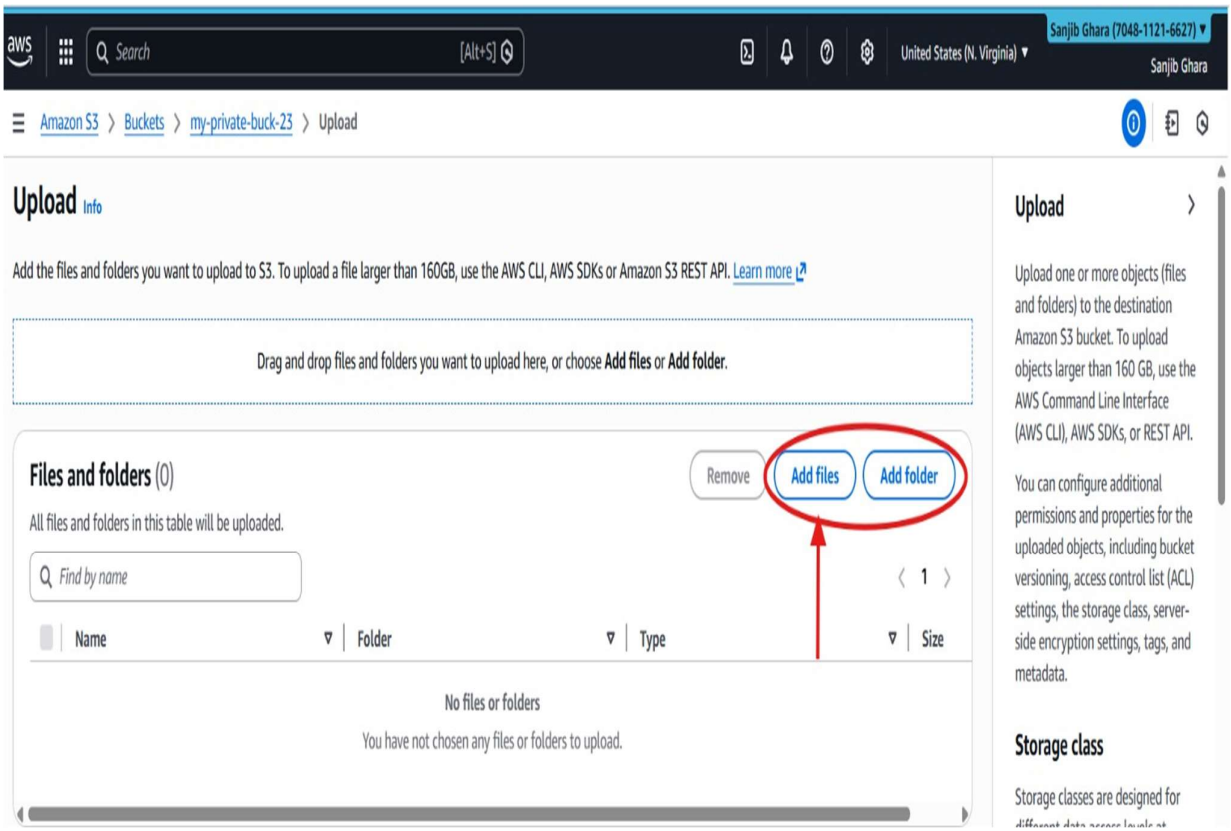
STEP-10: Then click on bucket name.



STEP-11: After that click on upload option.

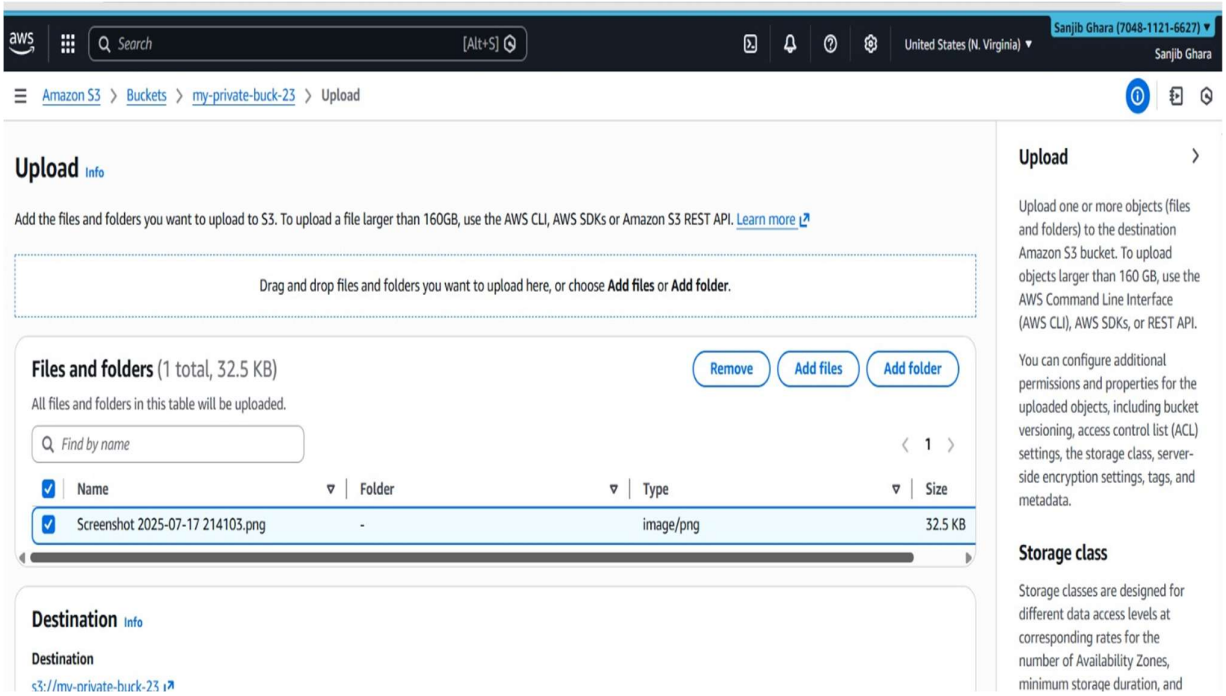


STEP-12:now we are inside the bucket, then click on Add files.

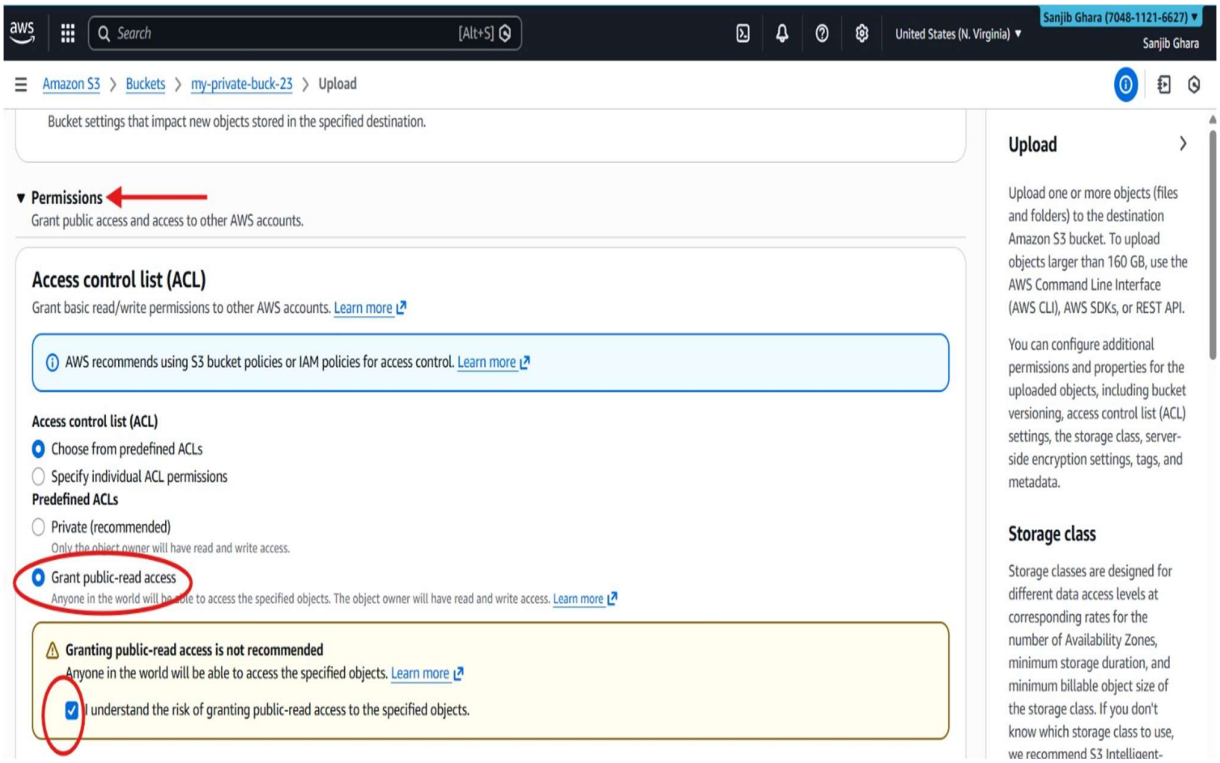


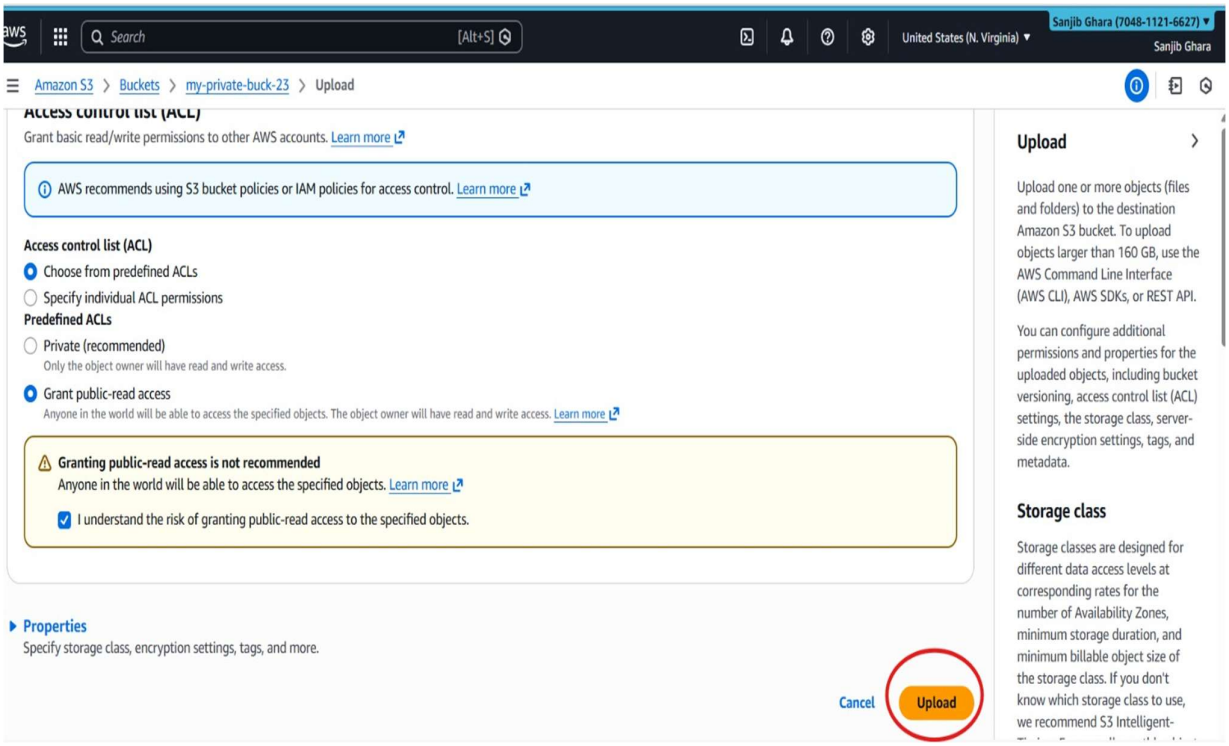
STEP-13: we take a file from our device.

STEP-14: After that we need to select the file and give permission for public access.

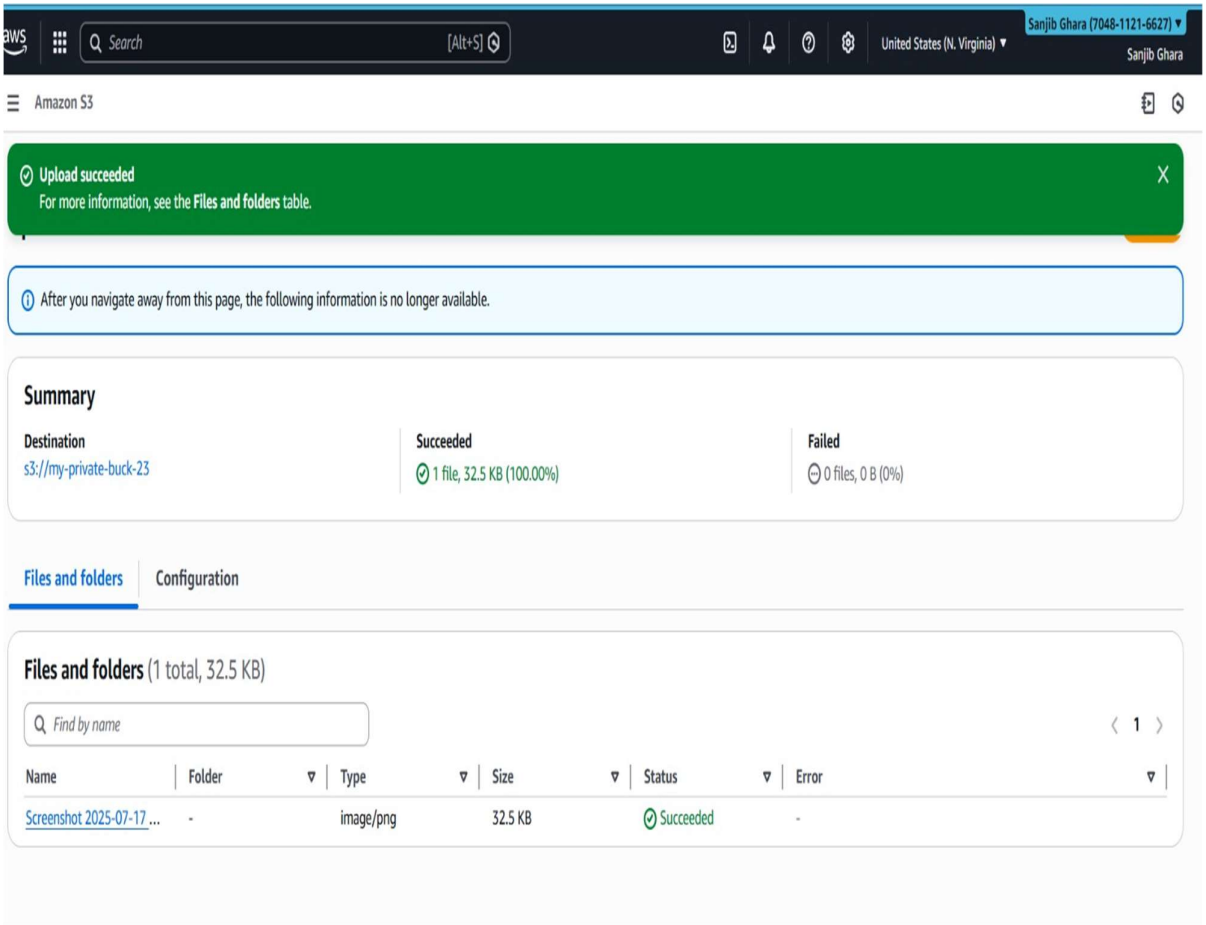


STEP-15:To give permission, click on "Grant-public-read-access" and upload the file.

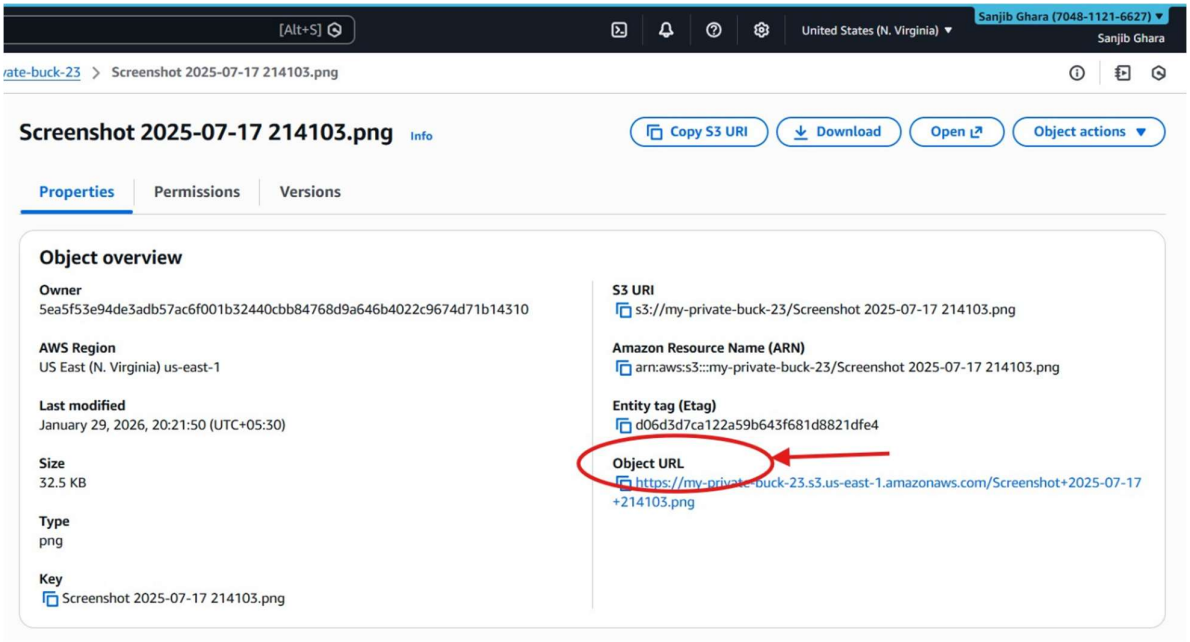


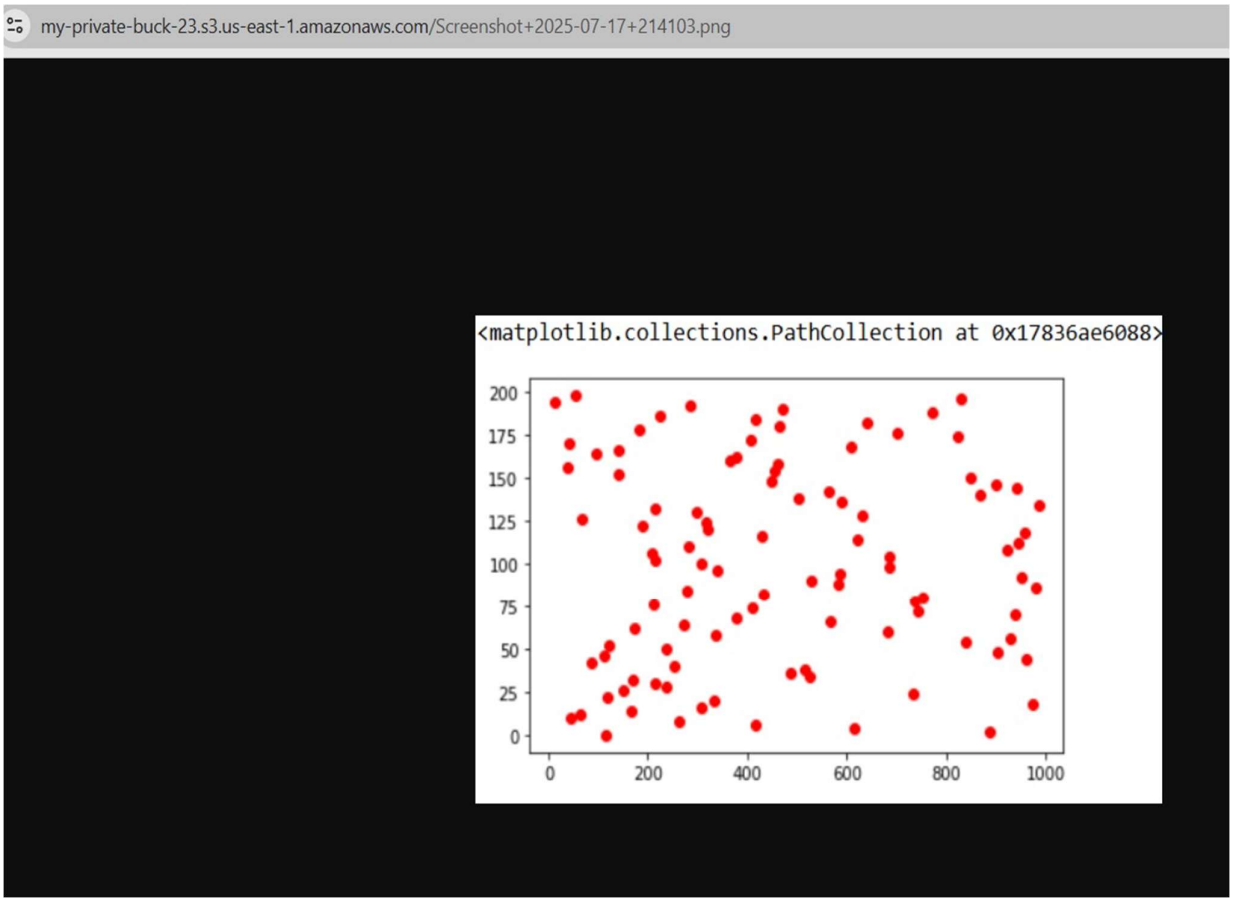


STEP-16: the file uploaded successfully. And click on the file name.



STEP-17: After that from the file properties copy the object URL and paste it in a new window.





STEP-18: Now we can access the object.
