

SANJIB GHARA
BTECH/CSE/23/065
SDITO LAB ASSIGNMENT

Assignment no: -2

CREATE MFA FOR AUTHENTICATION.

Solution: --

Steps: --

1. At first, we need to open the AWS console.
2. Then go to the “**Security Credentials**”. And open it.

3. Then scroll down and we find “**Multi Factor Authentication**”. There we click on “**Assign MFA device**”.

Assign MFA device

MFA device

Device options
In addition to username and password, you will use this device to authenticate into your account.

Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.

Hardware TOTP token
Authenticate using a code generated by Hardware TOTP token or other hardware devices.

Cancel **Next**

6. Then in the next interface we need to scan the **QR code by GOOGLE AUTHENTICATOR** app.

7. After that we write two consecutive code from the app into two given field.

8. Then Click **“ADD MFA”**.

✓ MFA device assigned

You can register up to 8 MFA devices of any combination of the currently supported MFA types with your AWS account root and IAM user. With multiple MFA devices, you only need one MFA device to sign in to the AWS console or create a session through the AWS CLI with that user.

My security credentials

Root user Info

The root user has access to all AWS resources in this account, and we recommend following [best practices](#). To learn more about the types of AWS credentials and how they're used, see [AWS Security Credentials](#) in AWS General Reference
